

Project Design Phase-I
Proposed Solution

Date	10 October 2022
Team ID	PNT2022TMID14504
Project Name	Project – News Tracker Application
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	<p>A news-sharing app wants to help users find relevant and important news easily every day and also understand explicitly that the news is not fake but from proper sources.</p> <p>Multiple news-sharing programmes might be used by one user, and these applications are regularly flooded with alerts. Furthermore, a lot of fake news is broadcast. A news-sharing app seeks to make it easier for users to acquire daily important and relevant news and to clearly indicate that the information is real and has been gathered from reputable sources.</p>
2.	Idea / Solution description	The app should include all of the trustworthy sources from across the world and then specify in each article which source has validated this news because I'm assuming that customers can't discern the difference between real and fake news.
3.	Novelty / Uniqueness	Creating attractive user interface for the customers and also deliver a important News Headliness with more details.
4.	Social Impact / Customer Satisfaction	Creating Awareness about How to overcome negative thoughts and also spreading socialily responsible news.For customer Satisfication ,we Track all kind of news .it will be more Usefull to get knowledge in Today's World.
5.	Business Model (Revenue Model)	<p>Our First and most important Business is to deliver a good content or good news to the people apart from that We are going to promote advertisement about good products.</p> <p>Newsfeed application:</p> <p>Newsfeed apps are apps in which a continuous stream of news items (the feed) is published. These articles mainly consist of text and photography, regularly supplemented with video, audio, or interactive elements (statistics,</p>

		etc.). The news articles offered can be free, paid, or a combination of the two.
6.	Scalability of the Solution	<p>Application scalability refers to the capacity of an app to handle growth, especially in handling more users and evolving concurrently with your business needs. In simple terms, scalability is your application's ability to handle a growing user base without affecting the user experience and the app's performance. That means your applications' infrastructure needs to be able to support a large number of requests per minute (RPMs).</p> <p>This application is built with high data storage capacity ,processing power and networking can all be scaled using cloud computing infrastructure.scaling can be done quickly and easily.</p>
